

## Questions To Get Information

### Tests and Procedures:

- What will we find out from this test/procedure?
- How accurate is it?
- What are the risks?
- Do they outweigh the benefits?
- What will you or we do differently based on the results?
- If nothing, is there a reason to do it?

### Treatments, Drugs and Interventions:

- How will this be helpful?
- Why must this be done now? What might happen if we wait an hour? A week? Or do nothing?
- What are the advantages/disadvantages?
- This may be the treatment you usually recommend, but what other approaches can you tell us about?
- If several treatment choices are possible: Is there a logical sequence in which to try the different options?
